

FOUNDATION OF EDUCATION

UNIT 1

• How has the Islamic perspective influenced education, the teacher, and the learner in Pakistan?

Islamic Influence on Education in Pakistan

1. Education

- Knowledge is seen as a **religious duty** in Islam.
- Both **religious and worldly education** are encouraged.
- **Islamic Studies** is a compulsory subject in schools.

2. Teacher's Role

- Teachers are **respected** and seen as **role models**.
- Expected to teach with **honesty, fairness, and kindness**.
- Follow the example of the **Prophet Muhammad (PBUH)** as a teacher.

3. Learner's Role

- Students are taught to seek knowledge with **pure intentions**.
- Must show **respect** to teachers and classmates.
- Expected to follow **Islamic values** like truth, discipline, and responsibility.

• What do the educational and ideological foundations of education say about the obligations of an Islamic state towards its minority members

1. Educational Foundations

- An **Islamic state** has a responsibility to provide **equal access to education** for all its citizens, including **minorities**.
- Education should be based on **justice, equality**, and the right to learn for everyone, regardless of **religion or background**.
- **Islamic teachings** stress the importance of **tolerance** and **respect** for diversity, ensuring **minorities** receive the same opportunities.

2. Ideological Foundations

- Islam supports the idea of a **fair and just society**, where **minority rights** are protected.

- The state must ensure that **minorities** are free to practice their religion, and their **cultural rights** are respected.
- **Prophet Muhammad (PBUH)** set an example by treating **minorities** fairly and ensuring their inclusion in society.

Conclusion

An Islamic state must ensure **fair treatment**, **equal opportunities**, and **respect** for its minority members in both education and society. It must uphold **justice** and provide **protection** to their rights.

By keeping a reflective journal, Student Teachers will reflect on their learning from the unit and state ways in which this will affect their professional life in this 21st century.

Reflective Journal: Impact of Learning on Student Teachers' Professional Life in the 21st Century

1. Reflection on Learning

- Student teachers should **reflect on the key concepts** they learned during the unit, such as **teaching methods**, **pedagogical theories**, and **classroom management strategies**.
- Consider how the knowledge gained will help in **adapting to diverse learning needs** and **integrating technology** into lessons.

2. Ways This Affects Professional Life

- **Adaptability:** Knowledge gained will help teachers **adjust to changing educational trends** in the 21st century.
- **Technology Integration:** The ability to use **digital tools and resources** effectively in the classroom.
- **Student-Centered Learning:** Applying modern teaching techniques that focus on **active learning**, **critical thinking**, and **collaboration**.
- **Lifelong Learning:** Reflection encourages teachers to become **lifelong learners**, adapting to new research and **evolving educational practices**.

3. Future Impact

- This reflective practice helps student teachers become more **self-aware**, **effective**, and **innovative educators**.
- They will be better equipped to handle **diverse classrooms**, **global challenges**, and contribute to **building an inclusive educational environment**.

UNIT 2

• How have classical and contemporary philosophies influenced your education?

Here's a **short answer** in **bullet points with headings** for the question:

How Classical and Contemporary Philosophies Have Influenced My Education

1. Classical Philosophies

- **Idealism:** Focus on **moral education** and **developing character**.
 - Encouraged me to **value truth, respect, and knowledge** in my learning process.
 - **Realism:** Focus on **factual knowledge** and the **real world**.
 - Encouraged me to seek practical and **scientific knowledge**, applying it to everyday life.
 - **Pragmatism:** Learning through **experience and problem-solving**.
 - Inspired me to focus on **hands-on learning** and apply concepts to **real-world challenges**.
-

2. Contemporary Philosophies

- **Progressivism:** Education centered around **student needs and interests**.
 - Encouraged me to focus on **student-centered learning** and value **collaboration and creativity**.
- **Constructivism:** Learning as a process of **building knowledge**.
 - Helped me understand the importance of **active learning** and **critical thinking** in the classroom.

- **Humanism:** Focus on **personal growth** and **individual potential**.
 - Influenced me to **value each learner's unique strengths** and encourage a **supportive, nurturing environment**.

Conclusion

Classical philosophies have taught me the importance of **values and practical knowledge**, while contemporary philosophies have emphasized **student-centered learning, critical thinking**, and **personal growth** in education.

- How have philosophical thoughts influenced the aim, content selection, and instructional practices?
- What evidence do you have of epistemological, ontological, and axiological knowledge within the content of your subject area?

Student Teachers will analyse and compare any two philosophies and their influence on instruction, the school environment, subject matter, and the teacher's role. They will identify and compare the kind of society the philosophers intend to construct, as well as examine the overlaps and differences. Student Teachers will be required to analyse and explain epistemological, axiological, and ontological forms of knowledge from their subject matter in an essay-type assignment.

UNIT 3

How have economic, political, and social structures historically influenced education and individual action?

- What relationships historically exist between economic, political, and social structures and how schools, teachers, and learners work?
- How has social change influenced education throughout the history of education?

Student Teachers will prepare a presentation (graphic organizer, poster session, PowerPoint, etc.) on how social structure and culture influence individual action, education, and schooling and how education in turn influences social structure and culture.

UNIT 4

- Which of the four psychological perspectives are most applicable in today's classroom situations in Pakistan?
- What facts and ideas show that these four psychological perspectives on education are the best guidelines for classroom teaching, learning, and assessment?

• How would you apply your learning to develop an assessment procedure for your students?

Construct an assessment procedure for your students that will represent any one of the psychological perspectives, and show how it helps to explain classroom practices.

UNIT 5

• What changes would you make to improve the condition of education?

• What facts or ideas are evidence that we still strongly hold on to historical practices in education?

• What is the role of the HEC in the education system in Pakistan?

• What conclusions can you draw from history to guide our present education

system?

• Compare and contrast the education system during the Mughal period with the current education system in Pakistan. In your opinion, which system is a better means for human development?

• Critically analyse the work of Sir Syed on education. Discuss the position and place of education in the 18th amendment. In your

opinion, what steps need to be taken by the provinces to provide quality education to all their citizens?

• Compare education in different periods and link this with pre-partition and post partition in pakistan

PAST PAPERS

2021

Section-A (30 Marks)

1. List down various schools of thought in education. And elaborate the one you like the most.

Schools of Thought in Education:

- Idealism
 - Focuses on ideas, values, and truth.
 - Teacher is the role model and teaches moral values.
 - Believes mind and soul are more important than material things.
- Realism
 - Focus on science, facts, and real life.
 - Learning is based on observation and experiments.
 - Students should study math, science, and nature.
- Pragmatism
 - Learning happens by doing and experience.
 - Education must be useful in life.

Students should be active participants, not passive listeners.

- Existentialism
 - Focus on freedom and personal choice.
 - Each student is unique and must find their own purpose.
 - Teachers help students think and choose for themselves.
- Behaviorism
 - Learning is a change in behavior.
 - Students learn by rewards and punishments.
 - Teacher controls the environment for learning.
- Constructivism
 - Students build their own knowledge through experience.
 - Learning is a personal and social activity.
 - Teachers guide learning, not just give lectures.

My Favorite: Pragmatism

- I like Pragmatism because it focuses on real life.
- It believes that students learn best by doing, not just reading or memorizing.
- It makes learning interesting and useful for everyday life.
- Teachers and students work together, like a team

2. Define education as a behaviour modification process) And supply the elements of education.

 Definition:

Education is a process that brings changes in human behaviour.

These changes are usually positive, like becoming more knowledgeable, polite, responsible, or skillful.

It means:

"Education helps a person think better, act better, and live better."

 Education as Behaviour Modification:

- It helps people learn new things.
- It removes bad habits and builds good habits.
- It changes:
 - How people think (mental behaviour)
 - How people act (physical/social behaviour)
 - How people feel (emotional behaviour)

Example:

- A child learns to say thank you, share with friends, and solve math problems.
- These are all modifications (changes) in behavior.

 Elements of Education:

There are five basic elements that make education happen:

Element	Explanation
1. Educator	The person who gives education (like teacher, parent, or trainer).
2. Learner	The person who receives education (like student or trainee).
3. Content	What is being taught (subjects, skills, values, or experiences).

4. Method	How the teaching is done (lecture, discussion, activities, online tools).
5. Environment	Where learning takes place (school, home, virtual classroom, playground).

Summary in Easy Words:

- Education changes behaviour in a good way.
- It makes a person smarter, kinder, and more skilled.
- To make education work, we need:
 - A teacher,
 - A student,
 - A subject,
 - A way to teach,
 - A place to learn.

3. What is the rationale for the course on Foundation of Education?

What does "rationale" mean?

Rationale means: *"Why is this course important?" or "What is the reason for teaching this subject?"*

Meaning of Foundation of Education:

- It is the base or root of all teaching and learning.
- This course gives basic knowledge about:
 - Philosophy (what is education and why we teach),
 - Psychology (how students learn),
 - Sociology (how society affects education),
 - History (how education has changed over time).

Main Reasons (Rationale) for This Course:

1.  To Understand the Purpose of Education
 - Why do we educate people?

- What are the goals of teaching?
- How does education help individuals and society?

2. 🧑🏫 To Train Better Teachers

- Teachers must know how students think, feel, and learn.
- Helps teachers choose best methods to teach.
- Builds strong teaching philosophy (what a teacher believes).

3. 🌍 To Understand Society and Culture

- Education is connected to social values, religion, economy.
- Teachers must know how society influences students.

4. ⌚ To Learn from History

- By learning old education systems, we improve today's education.
- Understand how education changed in Pakistan and the world.

🔄 To Connect Theory with Practice

- This course helps future teachers apply theories in the classroom.
- Learn why some teaching methods work better than others.

4. Sketch and briefly explain the progressivism's views on education.

🎯 4. Sketch and Briefly Explain Progressivism's Views on Education

🧠 What is Progressivism?

- Progressivism is a student-centered philosophy of education.
- It believes that:
 - Students learn best through experience.
 - Education should be practical, not only theory.
 - Problem-solving, critical thinking, and real-life activities are most important.
- Famous supporter: John Dewey.

📝 Simple Sketch (Flowchart of Progressivism)

mathematica.

Student Interests

Real-World Problems

Active Learning (Projects, Experiments)

Critical Thinking and Teamwork

Better Understanding and Practical Skills

Main Views of Progressivism:

1. Focus on Students' Interests

- Students are the center of education.
- Learning should connect to what students like and need.

2. Learning by Doing

- Students learn better when they do activities like experiments, group projects, field trips, and discussions.

3. Problem-Solving Approach

- Education should teach how to solve real-life problems, not just memorizing information.

4. Cooperation and Democracy

- Classrooms should be like a small democratic society.
- Students learn to respect others, share ideas, and make decisions together.

5. Teacher as a Guide

- Teacher is not a strict boss.
 - Teacher acts like a helper or coach, supporting students in their learning journey.
-

Summary in Simple Words:

Progressivism believes that education should be practical, based on student interests, and focused on real-life problems.

Students should actively participate and learn by doing, while teachers guide them, not control them.

5. Name any four recent educational practices adapted in Pakistani schools.

5. Name Any Four Recent Educational Practices Adapted in Pakistani Schools

1. 📱 Use of Technology in Classrooms

- Many Pakistani schools now use smart boards, multimedia projectors, tablets, and internet resources.
- Online classes, E-learning platforms, and educational apps are becoming common, especially after COVID-19.

2. 🧠 Activity-Based Learning

- Students are involved in group work, experiments, role-playing, and projects.
- Focus is on "learning by doing" rather than just reading books or listening to lectures.
- Helps students develop creativity and critical thinking.

3. 🌐 STEM Education (Science, Technology, Engineering, Mathematics)

- Many schools have started STEM programs to prepare students for future careers in science and technology.
- Students do science projects, robotics, and coding activities.

4. 🤝 Inclusive Education

- Schools are working to include children with special needs in regular classrooms.
- Special teachers and facilities are provided so that every child gets a chance to learn.
- Promotes equality and diversity in education.

Summary in Simple Words:

Pakistani schools are now using technology, activity-based methods, STEM education, and inclusive practices to make learning more modern, practical, and equal for all students.

6: Identify any two of National Professional Standards for Teachers having direct linkage with Foundations of Education.

1. 📖 Standard: Knowledge of Islamic Values and National Ideals

- Teachers must understand and promote Islamic teachings, national identity, and ethical values.

- It connects to the philosophical foundation of education because:
 - Philosophy teaches what is right and wrong.
 - It helps teachers guide students to become good human beings and responsible citizens.
- Teachers must build students' character based on morality, patriotism, and social responsibility.

2. 🧠 Standard: Understanding of Child Development and Learning Theories

- Teachers must know how children grow physically, mentally, emotionally, and socially.
- It connects to the psychological foundation of education because:
 - Psychology explains how students learn and what teaching methods work best. Teachers can create better lessons by knowing students' needs, interests, and abilities

✅ Summary in Simple Words:

Two important standards linked to the foundations of education are:

1. Knowledge of Islamic Values and National Ideals (philosophy side)
2. Understanding Child Development and Learning Theories (psychology side)

7. Explain the underlined terms given in the following text.

Within the epistemological frame that focuses on the nature of knowledge and how we come to know, there are four major educational philosophies, each related to one or more of the general or world philosophies just discussed. These educational philosophical approaches are currently used in classrooms the world over..."

🧠 Epistemological Frame

- Epistemology means: the study of knowledge.
- It asks:
 - What is real knowledge?
 - How do we know what we know?
- Epistemological frame means the way we think about knowledge and how people learn things.
- In education, it helps decide what is important to teach and how students should learn.

📖 Nature of Knowledge

- This means: "What is knowledge?"
- It asks:
 - Is knowledge facts, skills, beliefs, or experiences?
 - How is knowledge organized and understood?
- In education, understanding the nature of knowledge helps teachers decide what to teach and how to help students think critically.

Educational Philosophies

- Educational philosophies are big ideas or beliefs about:
 - What is the purpose of education?
 - How should students be taught?
- Examples:
 - Idealism: Focus on ideas and values.
 - Realism: Focus on real-world facts.
 - Pragmatism: Focus on practical experiences.

World Philosophies

- World philosophies are general beliefs about life, reality, and human nature.
- These beliefs come from thinkers and cultures from around the world.
- World philosophies like Idealism, Realism, Pragmatism, and Existentialism influence how we think about education, politics, religion, and life.

Summary in Simple Words:

- Epistemological frame: How we think about learning and knowledge.
Nature of knowledge: What knowledge really is.
- Educational philosophies: Ideas about how and why we teach.
- World philosophies: Big life ideas from around the world that affect education.

Section-B (30 Marks)

1. What are the modern aims of education? Explain with examples.

Meaning of "Aims of Education"

- Aims of education mean the goals or purposes for which education is given.
- It answers the question:
"Why do we educate people?"

In the modern world, education is not only about reading and writing. It also focuses on personal growth, job skills, social responsibility, and lifelong learning.

Modern Aims of Education

1. Intellectual Development

- Education helps people think clearly, logically, and creatively.
- It develops skills like problem-solving, critical thinking, and decision-making.
- Example: Students are taught to solve math problems and also to analyze real-world problems like climate change.

2. Social and Moral Development

- Education teaches how to live peacefully in society.
- It builds values like honesty, respect, cooperation, and tolerance.
- Example: Schools celebrate Cultural Days to promote respect for different cultures and religions.

3. Vocational or Professional Preparation

- Education prepares students for future jobs and careers.
- It gives technical skills and professional training.
- Example: Teaching computer programming, business management, and technical courses in schools and colleges.

4. Personal Development

- Education helps students know themselves — their talents, interests, and goals.
- It promotes self-confidence, leadership, and emotional strength.
- Example: Leadership programs and sports activities develop confidence and teamwork.

5. Adaptation to Change and Lifelong Learning

- The modern world changes fast (new technology, new jobs).

- Education teaches students to be flexible, adapt to new situations, and keep learning all their life.
- Example: Learning how to use AI tools or online learning platforms even after finishing school.

6. 🌱 Environmental Awareness

- Modern education teaches care for nature and sustainable living.
- Students learn about climate change, saving water, and protecting animals.
Example: Schools organize tree plantation drives and environmental projects.

✅ Summary in Simple Words:

The modern aims of education are to make students smart, skilled, responsible, and lifelong learners, ready to serve themselves, their society, and the world.

2. As an educator, define education as a change agent?

🌍 What is a "Change Agent"?

- A change agent is something that brings positive change to society, people, or systems.
- It helps improve things and solve problems.

🎓 Education as a Change Agent

Education is a powerful tool that creates positive change in individuals and society.

It helps to:

1. Change Minds (Intellectual Change)
 - Makes people think better and smarter.
 - Helps people solve problems and make good decisions.
 - Example: Teaching critical thinking so people don't believe in fake news.
2. Change Behavior (Moral and Social Change)
 - Teaches people to respect others, follow laws, and be responsible.
 - Makes society peaceful and just.
 - Example: Teaching students to practice tolerance and honesty.
3. Change the Economy (Economic Change)
 - Educated people can get better jobs and start businesses.
 - Reduces poverty and helps the country grow.

- Example: Vocational training that helps students learn technical skills.

4. Change the World (Global Change)

- Education spreads awareness about issues like climate change and human rights.
- Encourages people to work for a better world.
- Example: Teaching students about sustainability and global citizenship.

3. Why is globalization of education so important that we need to internationalize all the academic standards?

3. Why is Globalization of Education So Important That We Need to Internationalize All the Academic Standards?

Meaning of Globalization of Education

- Globalization of education means making education connected across the world.
- Students, teachers, and knowledge can now move easily across countries.
- Learning is not limited to one country — it is global.

Why is Globalization Important in Education?

1. Global Opportunities for Students and Teachers

- Students can now study, work, and live in different countries.
- To match other countries, students need international-level knowledge and skills.
- Example: A Pakistani student studying in Canada or working in Dubai.

2. Sharing Best Educational Practices

- Different countries have different strong education systems.
- By internationalizing standards, we learn from the best methods.
- Example: Using Finland's model for creative learning or Japan's model for discipline and teamwork.

3. Better Job Market Preparation

- Companies want workers who have global skills like communication, technology use, and problem-solving.
- International standards help students compete for jobs worldwide.
- Example: A multinational company looking for employees who understand different cultures.

4. Promoting Global Understanding and Peace

- Education can connect people from different countries.
- It teaches respect for different cultures, religions, and ideas.
Helps in building peace and cooperation globally.

5. Upgrading Educational Quality

- When we follow international standards, schools and universities improve.
- Students get better resources, better teachers, and better learning experiences.

4. How do ideological foundations reflect in culture and community?

Meaning of Ideological Foundations

- Ideology means a set of beliefs, ideas, and values that people follow.
- Ideological foundations are the basic beliefs that guide how a society lives, behaves, and organizes education, politics, and social life.

How Ideological Foundations Show Up in Culture and Community

1. Cultural Values and Traditions

- Ideologies shape the values, customs, festivals, clothing, art, and languages of a community.
 - What people believe becomes part of their daily life and celebrations.
 - Example:
In Pakistan, Islamic ideology influences clothing (like wearing hijab), celebrations (like Eid), and behavior (like respect for elders).
-

2. Social Rules and Behavior

- Community behavior is based on ideological beliefs about what is right and wrong.
 - Ideology teaches people how to treat others, what is important, and what is forbidden.
 - Example:
A society based on Islamic ideology teaches people to help the poor (Zakat) and practice honesty.
-

3. Educational Systems

- The ideology of a society shapes school curriculums and teaching methods.
Schools teach students national values, history, and moral lessons according to the

community's ideology.

Example:

In Pakistan, textbooks include lessons on Islamic history, national heroes, and patriotism.

4. Laws and Government

- The legal system (laws) and government policies are often based on the dominant ideology.
 - This keeps the society's culture strong and organized.
 - Example:
Pakistan's constitution is based on Islamic principles, like guaranteeing religious rights and moral law
-

 In Simple Words:

The beliefs (ideological foundations) of a society shape how people dress, celebrate, behave, learn, and live together. Culture and community life are the mirror of a society's ideology.

 Quick Table for Easy Memorization

Reason	Simple Example
Global Opportunities	Study or work abroad
Sharing Best Practices	Learning teaching methods from different countries
Better Job Preparation	Skills for multinational companies
Global Understanding	Respecting other cultures
Quality Improvement	Better education system with higher standards

5. Explain the education as a business activity, and supply arguments for or against privatization/nationalization of education in Pakistan.

Education as a Business Activity

- Education as a business means schools, colleges, and universities are run to make profit, just like a company.
- In this system:
 - Students are seen as customers.
 - Education is sold like a product.Institutions focus on making money along with teaching.

Example:

- Private schools charging high fees for giving better facilities (smart classes, air-conditioned rooms, modern labs).

Arguments FOR Privatization of Education

(Privatization = Schools owned by private people, not the government.)

1. Better Quality Education

- Private schools often provide modern facilities, qualified teachers, and advanced technology.

2. More Efficiency and Competition

- Private schools compete with each other to give better services.
- This improves teaching methods and student performance.

3. More Choices for Students

- Students can choose between different types of schools based on their needs and interests.

Arguments AGAINST Privatization of Education

1. Very Expensive

- High fees make good education only available for rich families.
- Poor and middle-class families suffer.

2. Creates Inequality

- Privatization increases the gap between rich and poor.
- Rich students get better education, while poor students are left behind.

3. ❌ Education Becomes a Business, Not a Service

- Focus shifts from student development to earning profits.
 - Real purpose of education (building good human beings) is lost.
-

Arguments FOR Nationalization of Education

(Nationalization = Government owns and runs the schools.)

1. ⚖️ Equality for All

- Free or low-cost education can be provided to every citizen, rich or poor.

2. 👤 Focus on Character Building

- Government schools can focus more on moral values, national unity, and social service instead of profit.
-

! Problems with Nationalization

- Sometimes government schools suffer from poor management, low quality, and lack of facilities.
 - Corruption and political influence can also harm the education system.
-

✅ Summary in Simple Words:

- Education is becoming a business when it focuses more on money-making than student growth.
 - Privatization improves quality but creates inequality.
 - Nationalization ensures equality, but needs better management
-

1. Define the term Philosophy and write the name of main branches of philosophy?

Philosophy is the study of big questions about life, the world, and how we think. It tries to understand things like what is real, what is right or wrong, and how we know what we know.

The main branches of philosophy are:

Metaphysics: Studies what exists and the nature of reality.

Epistemology: Focuses on knowledge—how we know things and what we can know.

Ethics: Look at what is right and wrong, and what makes a good life.

Aesthetics: Studies beauty, art, and what makes something beautiful or artistic.

Logic: Studies how to think clearly and make good arguments.

Political Philosophy: Explores questions about government, laws, and justice.

Philosophy of Mind: Looks at the mind, thoughts, and what makes us conscious.

Philosophy of Language: Studies how language works and how we communicate.

2. Write four aims of education?

Personal Development: To help individuals develop their full potential, including intellectual, emotional, social, and moral growth.

Knowledge and Skills Acquisition: To provide students with the knowledge and practical skills they need for personal success and to contribute to society.

Social and Cultural Awareness: To prepare individuals to live in society by promoting values like respect, responsibility, and cultural understanding.

Critical Thinking and Problem-Solving: To encourage students to think critically, analyze information, and solve problems creatively in various situations

3. Write the main four differences between idealism Define sociological foundation in four points?

Differences Between Idealism and Realism:

1. Reality:

- Idealism: Reality is based on ideas and the mind.
- Realism: Reality exists independently of the mind.

2. Knowledge:

- Idealism: Knowledge comes from ideas and abstract thinking.

- Realism: Knowledge comes from observing the real world.
3. Education Focus:
- Idealism: Focuses on developing the mind and moral values.
 - Realism: Focuses on practical, real-world knowledge.
4. Curriculum:
- Idealism: Includes philosophy, literature, and history.
 - Realism: Includes science and mathematics.
-

4. Sociological Foundation of Education:

1. Socialization: Teaches norms and values of society.
2. Social Order: Maintains rules and social structures.
3. Cultural Transmission: Passes down traditions and culture.
4. Social Change: Promotes new ideas and societal awareness.

5.. What are the methods of teaching in As-Suffa?

The methods of teaching in As-Suffa (the first Islamic school of education during the time of Prophet Muhammad) focused on practical and effective approaches. Here are the main methods used:

1. Direct Instruction: The Prophet Muhammad (PBUH) himself taught the students directly, conveying knowledge through personal interaction, discussions, and teachings.
2. Group Learning: Students were divided into groups, and they learned together in a collaborative environment, which encouraged peer-to-peer learning and support.
3. Individual Attention: Each student received individual attention and guidance according to their needs and pace of learning.
4. Practical Application: Students were encouraged to apply what they learned in real-life situations, especially in areas of religious practice, morality, and ethics.

5. Question and Answer: The teaching method encouraged active participation, where students could ask questions, and the teacher would answer, fostering critical thinking and deeper understanding.

These methods created a dynamic and interactive learning environment focused on moral, spiritual, and intellectual development.

6. What are the four stages of education in Emile?

The four stages of education in *Émile* (written by Jean-Jacques Rousseau) are as follows:

1. Infancy (Birth to 5 years):
The focus is on physical development and sensory experiences. Children learn by interacting with their environment and developing basic motor skills and senses.
2. Childhood (5 to 12 years):
Education during this stage emphasizes learning through play and experience. Children are taught to observe the world, and their curiosity is nurtured. The focus is on developing practical skills and understanding basic concepts.
3. Adolescence (12 to 15 years):
This stage is focused on intellectual development. Adolescents are ready for more formal learning, including subjects like literature, history, and science. It is also a time for developing critical thinking and moral understanding.
4. Maturity (15 to 20 years):
The final stage is where individuals are ready for adult responsibilities. They are taught about society, relationships, and how to make moral decisions. This stage emphasizes practical education and preparing for adult life, including vocational training and further intellectual development.

7. Write four differences between Islamic & Western philosophies?

1. Concept of God:
 - Islamic Philosophy: Believes in the existence of one God (Allah), who is the center of all existence and the source of knowledge and moral values.
 - Western Philosophy: Includes various perspectives, from theistic views (belief in God) to atheistic or agnostic perspectives, where God's existence may or may not be accepted.

2. Source of Knowledge:

- Islamic Philosophy: Emphasizes divine revelation (Qur'an and Hadith) as the ultimate source of knowledge, alongside reason and observation.
- Western Philosophy: Often prioritizes reason, logic, and empirical evidence as the main sources of knowledge, sometimes questioning or disregarding religious texts.

3. Purpose of Life:

- Islamic Philosophy: The purpose of life is to worship and submit to God (Allah), follow His guidance, and achieve moral and spiritual growth.
- Western Philosophy: The purpose of life varies across different Western philosophical schools, ranging from seeking personal happiness to creating individual meaning or achieving material success.

4. Ethics and Morality:

- Islamic Philosophy: Morality is derived from religious teachings and divine commands. What is considered right and wrong is based on the will of Allah.
- Western Philosophy: Ethics can be based on human reason, individual rights, or societal norms, with morality often viewed as subjective or relative depending on the philosophical framework.

SECTION: "B"

Q1. What is the meaning of education in Islam? Explain the importance of education in the light of Quran & Hadith?

Meaning of Education in Islam:

In Islam, education is the process of learning to understand the world, grow spiritually, and become a better person. It includes both knowledge of the world and religious teachings, helping individuals live a good life and follow Allah's guidance.

Importance of Education in the Quran and Hadith:

1. Education is a Command from Allah:

- Quran: The first word revealed to Prophet Muhammad (PBUH) was "Read," showing the importance of learning (Quran 96:1).

- Hadith: The Prophet Muhammad (PBUH) said, "Seeking knowledge is an obligation for every Muslim."
2. Knowledge Helps You Understand the World and Faith:
 - Quran: "Are those who know equal to those who do not know?" (Quran 39:9) – shows that knowledge makes a person wiser.
 - Hadith: "Whoever seeks knowledge, Allah will make it easier for them to enter Paradise" (Sahih Muslim).
 3. Knowledge Leads to Goodness:
 - Quran: "Those who know and fear Allah are the true scholars" (Quran 35:28).
 - Hadith: "The best of you are those who learn and teach the Quran" (Sahih al-Bukhari).
 4. Education Helps Society:
 - Quran: "My Lord, increase me in knowledge" (Quran 20:114).
 - Hadith: "A person who teaches good knowledge earns rewards as long as others benefit from it" (Sahih Muslim).

Conclusion:

In Islam, education is very important. It helps individuals grow in both knowledge and faith, and it benefits both the person and society. It is seen as a lifelong pursuit that brings both worldly and spiritual rewards.

2. What is pragmatism? What are the applications of pragmatism?

What is Pragmatism?

Pragmatism is a way of thinking that focuses on practical results. It says that ideas are true if they work well in real life, and it's more about solving problems than discussing theories.

Applications of Pragmatism:

1. Education:

In education, pragmatism means learning through hands-on activities and real-life examples, not just memorizing facts.
2. Decision Making:

It helps people make decisions by focusing on what will work best in real situations.

3. Problem Solving:

Pragmatism uses trial and error to find solutions that actually work, instead of relying on theories.

Social and Political Change:

In politics, pragmatism looks for practical solutions to current problems, rather than idealistic ideas.

In short, pragmatism is all about using what works best in real life.

Q3. What is the difference between ideology & religion? What is the Ideological foundation of education in Pakistan?

1. Difference between Ideology and Religion

Ideology	Religion
A set of ideas and beliefs that guide the political, social, or economic structure of a society.	A set of spiritual beliefs and practices related to faith in God or gods .
Can be man-made or created by thinkers or leaders.	Usually based on divine revelation and holy scriptures .
Can change over time depending on political needs .	Generally fixed and sacred for followers.
May or may not include religion.	Religion may influence ideology.
Example: Capitalism, Socialism, Democracy, Nationalism	Example: Islam, Christianity, Hinduism

2. Ideological Foundation of Education in Pakistan

Definition:

The **ideological foundation of education** refers to the **basic beliefs and values** on which the **education system** of a country is based.

3. Pakistan's Ideological Foundation of Education

✓ Based on Islam

- The ideology of Pakistan is based on **Islamic principles**.
- Pakistan was created so that **Muslims could live according to their faith**, traditions, and culture.
- Therefore, **education in Pakistan** is meant to promote **Islamic values**.

4. Key Points of Ideological Foundation in Pakistan's Education

☀ 1. Belief in Tawheed (Oneness of Allah)

- Teach students that **Allah is One**, and He is the **creator and controller** of everything.

☀ 2. Promotion of Islamic Values

- Curriculum includes **honesty, justice, respect, brotherhood**, and **tolerance**.
- Encourages **good character and moral behavior** based on Islam.

☀ 3. Development of an Islamic Society

- Education helps students become **good Muslims** and **responsible citizens**.
- Aim is to develop a society that follows **Quran and Sunnah**.

☀ 4. Two-Nation Theory

- The education system promotes the **Two-Nation Theory**, which explains that **Muslims and Hindus are different nations** with different beliefs and cultures.
- Reminds students why **Pakistan was created**.

☀ 5. Love for Pakistan and National Identity

- Curriculum encourages **patriotism, national unity**, and **loyalty to Pakistan**.
- Students are taught to work for the **progress and development** of their country.

Q4. Define the tom policy and report?How is the policy launched and applied?

1. Definition of Policy

- A **policy** is a **plan or set of rules** made by the **government or an organization** to guide future actions.
- In education, an **educational policy** gives **guidelines and goals** for improving schools, curriculum, teaching methods, and exams.

✓ **Simple Definition:**

A policy is a **formal written document** that shows what a **government wants to do** and how it will **achieve its goals**.

2. Definition of Report

- A **report** is a **written document** that provides **information, facts, or findings** about a specific topic.
- Reports are often written by **committees, experts, or commissions** to help the government make decisions.

✓ **Simple Definition:**

A report is a **document that explains what was found or recommended** after studying a problem or topic.

3. How is a Policy Launched?

✓ **Step-by-Step Process:**

1. Identification of Needs

- Problems in the education system are identified (e.g., low literacy, outdated curriculum).

2. Formation of Committees

- Government forms a **committee of experts, educators, and policymakers**.

3. Preparation of Report

The committee studies the problem and prepares a **report with suggestions**.

4. Approval by Government

- The **cabinet or ministry** reviews the report and approves it.

5. Official Announcement

- The policy is officially **launched by the government**, often through a **press conference or official documents**.

 Example: Pakistan's **National Education Policy 2009** was launched after expert consultations and review.

4. How is a Policy Applied?

 Steps to Apply Policy:

1. **Making a Plan**

- A **detailed action plan** is created based on the policy goals.

2. **Curriculum Revision**

- New curriculum or textbooks are developed.

3. **Training of Teachers**

- Teachers are trained to follow new guidelines.

4. **Implementation in Schools**

- Schools follow new rules, teaching methods, and syllabus.

5. **Monitoring and Evaluation**

- The government checks whether the policy is working and **makes changes** if needed

Q5. What is naturalism? Discuss how to use naturalism in our educational system?

1. Definition of Naturalism

- **Naturalism** is a **philosophy of education** that believes that **nature is the best teacher**.
- It says that education should be **according to the natural interests, needs, and growth** of the child.
- Naturalists believe that a child should **learn by doing** and through **experience**, not just by reading books or listening to lectures.

 Simple Definition:

Naturalism is the idea that education should be **child-centered** and based on **nature, experience, and freedom**.

2. Main Features of Naturalism in Education

Feature	Explanation
Child-Centered	The child is the focus, not the teacher or textbook.
Learning by Doing	Students learn better through practical activities , not rote memorization.
Freedom	Children should be free to explore and ask questions.
Nature as the Best Teacher	Learning should happen in a natural environment (like outdoors or through real experiences).
No Strict Discipline	Discipline should be natural , not forced with punishments.

3. How to Use Naturalism in the Educational System (in Pakistan)

✓ 1. Activity-Based Learning

- Use **games, experiments, group work, field trips** to help students learn.
- For example, learning about plants by **growing a plant in class**.

✓ 2. Flexible Curriculum

- Allow space for **creativity, curiosity, and exploration**.
- Include subjects like **art, music, gardening**, etc.

✓ 3. Focus on Individual Differences

- Understand that **every child is unique**.
- Give students **choices** in how they learn (e.g., visual, hands-on, stories).

✓ 4. Learning in Natural Environments

- Arrange **outdoor learning**, like teaching science in a **garden or park**.
- Reduce classroom boundaries.

✓ 5. Less Rote Learning

- Avoid cramming and focus on **understanding** and **real-life application**.

✓ 6. Teacher as a Guide

- Teachers should **guide, not control**.
- Let students ask questions, explore answers, and learn from mistakes.

☀ 4. Benefits of Using Naturalism in Pakistan

- Encourages **creativity and thinking skills**.
- Makes education **enjoyable and meaningful**.
- Reduces **stress** and **fear of exams**.
- Develops **confidence** and **independence** in students.

Q6. Write short note on the following topics. (Any two)

a) Psychological Foundation b) Relation b/w Education & Philosophy c) Educational views of Iqbal

a) Psychological Foundation of Curriculum

- **Definition:**
Psychological foundation of curriculum means using **child psychology** to plan teaching and learning.
- **Main Points:**
 - Focuses on **how children learn and grow**.
Helps in understanding **student interests, abilities, and development stages**.
 - Guides **teaching methods, curriculum content, and assessment**.
 - Encourages **activity-based, student-centered** learning.
- **Importance:**
 - Makes learning **effective and enjoyable**.
 - Promotes **mental and emotional growth** of students.
Helps teachers use the **right strategies** for different age groups.

b) Relation between Education and Philosophy

- **Definition:**
Education and philosophy are closely connected.
Philosophy provides the ideas and **education applies those ideas in real life**.
- **Relation:**

- Philosophy gives the **aims and values** of education.
 - Education helps in **practicing those values** in daily life.
 - A teacher's method depends on their **philosophy** (e.g., naturalism, idealism).
 - Education is the **practical side** of philosophy.
- **Example:**

If a philosophy values **freedom**, education will use **child-centered and open learning** methods.

✓ **In short:**

Philosophy = Why to educate

Education = How to educate

c) Educational Views of Allama Iqbal

- **Main Ideas:**
 - Education should develop the **self (Khudi)** and **inner strength** of students.
 - Believed in combining **Islamic values with modern knowledge**.
 - Emphasized **character building, freedom, creativity, and hard work**.
 - Education must create **independent thinkers**, not slaves to the West.
 - Wanted youth to become **leaders, not followers**.
- **Quotes by Iqbal:**
 - *"Develop yourself so that God may choose you for His tasks."*
 - *"Education without character is like a sword in a madman's hand."*

2024

1) Psychological perspectives — Which one is most relevant to today's classroom challenges in Pakistan?

☀ Introduction:

Psychological perspectives help teachers understand how students **think, behave, and learn**.

In Pakistan, classrooms face many challenges such as:

- **Lack of motivation**
- **Large class sizes**
- **Diverse student abilities**
- **Limited resources**
- **Rote learning culture**

To deal with these, we must choose the **most relevant psychological perspective**.

✓ Most Relevant Perspective: Constructivist Perspective (by Piaget & Vygotsky)

📖 Why Constructivism Is Most Relevant:

Feature	Relevance to Pakistani Classrooms
Learning by Doing	Helps move away from rote learning to conceptual understanding .
Student-Centered	Gives importance to student needs, interests, and abilities .
Active Participation	Encourages group work, projects, and classroom discussions .
Scaffolding (Vygotsky)	Teachers support students at their level, which helps in large or mixed-ability classrooms .
Cognitive Development (Piaget)	Activities are designed according to the mental development stage of the child.

🎯 Examples of Classroom Application:

- Using **group projects** instead of only textbook exercises.
- Asking **open-ended questions** to promote thinking.
- Giving **real-life problems** to solve in math and science.
- Using **peer learning** in overcrowded classrooms.

🔍 Why Other Perspectives Are Less Relevant Alone:

Perspective	Limitation
Behaviorism	Focusing too much on reward and punishment ; may lead to rote learning .
Humanism	Good for moral development , but lacks clear structure for academic subjects.
Cognitive Psychology	Strong theory, but may be too abstract without social context.

2) Epistemological, ontological, and axiological knowledge in your subject — with examples.

1. Epistemological Knowledge (Knowledge about Knowing)

- It is about **how we know** and **how students learn**.
- It helps teachers understand different **ways of teaching and learning**.
- Teachers use this to choose methods that help students learn better.

Example:

If a teacher believes that students learn best by doing activities and asking questions, they use **activity-based learning**. This shows their **epistemological belief**.

2. Ontological Knowledge (Knowledge about Being)

- It is about the **nature of reality and human beings**.
- In education, it is related to how we see **students, teachers**, and the **learning process**.
- It affects how we treat students in the classroom.

Example:

If a teacher believes that **every child has talent and can learn**, this is their **ontological view** of learners.

3. Axiological Knowledge (Knowledge about Values)

- It is about **values, ethics, and what is good or important** in education.
- It guides how teachers behave and what values they teach.
- It includes honesty, respect, discipline, and fairness.

Example:

A teacher who encourages **respect for others**, **honest work**, and **equal chances for all students** is applying **axiological knowledge**.

Conclusion:

These three types of knowledge help teachers become better educators. They help in understanding:

- How to teach (**epistemology**)
- What to believe about learners (**ontology**)
- What values to promote (**axiology**)

3)Reforms to improve Pakistan's education system — if you had the authority.

Reforms to Improve Pakistan's Education System — If I Had the Authority

If I had the authority, I would bring the following reforms to improve Pakistan's education system:

1. Equal Education for All

- I would make sure that **all children**, rich or poor, **get the same quality of education**.
- Government and private schools should follow a **uniform curriculum**.

2. Training for Teachers

- I would provide **regular training programs** to improve the skills of teachers.
- Modern teaching methods like **activity-based learning** and **use of technology** would be taught.

3. Focus on Practical Learning

- I would reduce rote learning and promote **critical thinking** and **problem-solving skills**.
- More focus would be given to **science labs, computer classes, and fieldwork**.

4. Use of Technology

- I would introduce **smart classrooms, online learning tools, and digital libraries**, especially in rural areas.
- Students would learn computer skills from early classes.

5. Improved Examination System

- I would change the exam system to test **understanding, not just memory**.

- More **concept-based and creative questions** would be added.

6. Increase in Education Budget

- I would increase the **government spending on education**, especially for building schools, libraries, and teacher salaries.

7. Moral and Value Education

- I would include subjects that teach **ethics, citizenship, and values** like respect, honesty, and responsibility.

4)Influence of classical and contemporary philosophies on your learning and teaching principles.

Influence of Classical and Contemporary Philosophies on My Learning and Teaching Principles

Both **classical** and **contemporary** philosophies have shaped the way I think about teaching and learning. These philosophies guide how I understand education, students, and the role of a teacher.

1. Classical Philosophies

a. Idealism

- Focuses on **ideas, values, and moral education**.
- I believe that **good character and discipline** are important parts of education.
- I try to teach values like **truth, respect, and honesty** in my classroom.

b. Realism

- Believes that knowledge comes from the **real world and observation**.
- I focus on teaching facts and encourage students to observe and explore.

c. Pragmatism

- Promotes **learning by doing** and solving real-life problems.
- I use **activity-based learning** and allow students to learn from their experiences.

2. Contemporary Philosophies

a. Progressivism

- Focuses on the **needs and interests of students**.
- I try to make my lessons **student-centered** and use **group work and discussions**.

b. Constructivism

- Says that learners **build their own knowledge** through experience.
- I give students **projects, experiments, and questions** to help them learn actively.

c. Humanism

- Emphasizes **respect, freedom, and personal growth**.
- I create a friendly classroom where students feel **safe and motivated** to learn.

Conclusion:

These philosophies help me become a better teacher. They remind me to:

- Teach not only knowledge but also values (Idealism)
- Focus on real-world learning (Realism, Pragmatism)
- Understand each student's needs and help them grow (Progressivism, Humanism, Constructivism)

5) Islamic perspective on education, teacher's role, and learning in Pakistan.

Islamic Perspective on Education, Teacher's Role, and Learning in Pakistan

Islam gives great importance to **education**, the **role of teachers**, and **learning**. These ideas strongly influence education in Pakistan, which is an Islamic country.

1. Islamic Perspective on Education

- In Islam, seeking knowledge is a **duty for every Muslim man and woman**.
- The **first revelation** of the Quran was “**Iqra**” (Read), showing the value of learning.
- Education in Islam is both **religious and worldly**. It aims to develop a **complete personality** – spiritually, morally, and intellectually.

Key Focus Areas:

- Teaching **morals and values** like honesty, justice, and kindness
- Gaining knowledge that benefits the **individual and society**
- Learning for the **sake of Allah (SWT)**, not just for earning money

2. Role of the Teacher in Islam

- A teacher is considered a **guide and a role model**.
- Teaching is a **noble profession** in Islam, and teachers are respected highly.

Duties of a Teacher:

- Teach with **honesty and sincerity**
- **Treat students equally** and fairly

- Help students grow in **knowledge and character**
- Follow the **Prophet Muhammad (PBUH)** as the best example of a teacher

3. Islamic View of Learning

- Learning is a **lifelong process** in Islam.
- It includes both **religious education** (like Quran, Hadith) and **worldly knowledge** (like science, math, language).
- Learning should help us become **better Muslims** and **better human beings**.

4. In the Context of Pakistan

- Pakistan's **constitution and education policy** promote Islamic values in education.
- **Islamic studies** is a compulsory subject in schools.
- Teachers are expected to develop students' **faith, character, and sense of responsibility**.

Conclusion

The Islamic perspective sees education as a way to **please Allah, improve society, and build good character**. Teachers must be **honest, kind, and knowledgeable**, and learning should lead to both **worldly success** and **spiritual growth**.

6) Insights from Foundation of Education course — classroom relevance and benefits to future educators.

The **Foundation of Education** course gives important knowledge about the **purpose, philosophy, history, and principles** of education. It helps future teachers understand the **role of education in society** and become better professionals.

1. Understanding the Purpose of Education

- The course explains that education is not just about passing exams, but also about **building character, skills, and values**.
- It helps future teachers see education as a way to **develop the whole child** — mentally, socially, morally, and emotionally.

2. Knowledge of Educational Philosophies

- It introduces **classical and modern philosophies** like Idealism, Realism, Pragmatism, and Progressivism.
- Teachers can choose the right **teaching methods** based on these philosophies.

Classroom Benefit:

- Helps teachers design lessons that match **students' needs and learning styles**.

3. Historical and Social Background of Education

- The course teaches how education systems have developed over time.
- It explains how **culture, religion, economy, and politics** affect education.

Classroom Benefit:

- Teachers understand the **diverse backgrounds** of students and respect their differences.

4. Role of Teachers in Nation Building

- It highlights the **importance of teachers** in shaping the future of a country.
- Teachers are seen as **guides, mentors, and moral leaders**.

Classroom Benefit:

- Encourages teachers to take their role seriously and work with dedication.

5. Development of Positive Attitude and Ethics

- The course teaches the **values of patience, honesty, discipline, and respect**.
- These are essential for creating a **positive classroom environment**.

Conclusion

The Foundation of Education course prepares future educators by giving them a **strong base of knowledge, ethics, and teaching principles**. It connects theory with classroom practice and helps teachers become **confident, thoughtful, and effective** in their profession.

7) Historical impact of economic, political, and social factors on education and individual behavior.

Education is deeply affected by the **economic, political, and social conditions** of a country. These factors shape how education systems grow and also influence the **behavior of individuals**.

1. Economic Factors

- In history, poor countries had **limited access to education** due to lack of schools, teachers, and resources.
- Richer areas had **better education systems** and higher literacy rates.

Impact on Education:

- Quality of education depends on **funding and investment**.
- In poor areas, students often leave school early to support their families.

Impact on Individuals:

- People with less education may have **fewer job opportunities**.
- Economic hardship can lead to **dropout rates and child labor**.

2. Political Factors

- **Governments and political leaders** play a key role in shaping education.
- Political stability brings **progress in education**, while instability causes **school closures or inequality**.

Historical Example:

- In Pakistan, changes in government have affected **education policies, language of instruction, and funding**.

Impact on Individuals:

- Political bias in education can shape how individuals think and behave.
- People may grow up with **certain beliefs or attitudes** depending on what is taught in schools.

3. Social Factors

- Society's beliefs, culture, and religion influence **who gets educated and what is taught**.
- In many places, girls were not allowed to study in the past due to cultural reasons.

Impact on Education:

- Social values decide the **importance of education**, especially for **women, minorities, and rural populations**.

Impact on Individuals:

- Education shapes a person's **identity, confidence, and behavior**.
- Educated individuals are often more **open-minded, skilled, and responsible** in society.
