GENERAL METHOD OF TEACHING(GMOT)

UNIT:2

CODE NO:DTE-550/361

Lecture 02:

WORKING WITH GROUP AND INDIVIDUAL:

BACKGROUND:

Pair work, group work and Individual work can all be effective, if used at the right time and if structured in an appropriate way.

For teacher pair work and group work can be excellent tools to promote student interaction, individual work on the other hand is easier to access and often appeals to student with interpersonal intelligence.

As a teacher it is important to vary grouping depending on the goals and context of the activity and it is important to know what support to offer student for each situation.

Individual work is great for students to get a chance to think things through on their own, which is comfort way to process new info for many introverts.

Still, it can just as helpful for those who prefer group work to learn how to cope with the prospect of sitting still, keeping that noisy mouth shut, and puzzling out some answers without giving into any and Every distraction that come along.

INDIVIDUAL WORK CAN HELP

STUDENTS:

1. Gain Independence to think thing through on their own.
2. Improve confidence in working through a problem even when they don't feel certain about every step.
3. Work at their own level, rather than having to adopt to suit their group members.

4. Practice self-control-both in staying focused on the task at hand, and in having the willpower to avoid turning to a neighbor or asking the teacher for the answer.
5. Get more comfortable taking action on their own.
6. Gain creativity and effective thinking processes that can apply to problem solving across a range of subject and types of issues.
7. Students work at their own pace, they are confident about what they know and what they need to spend more time on, they can use their preferred learning style and strategies.

CONCLUSION

Plus, it can be easier for the teacher to assess an individual's work at least, easier in an traditional sense, if the person has an idea of the “norm” for the type of work he/she is looking for. It can be tough to assess an individual's skills and motivation all while being aware of inevitable comparisons with others.

GROUP WORK:

Group work can be good idea when anyone want to get their students to think harder and dig deeper, and when some variety in skill levels and ways of thinking about things can be a benefit to all. Say a big math problem with lots of different steps; or a scene in Ulysses that could be interpreted in three or 300 different ways; or teacher doing a unit an Ancient Egypt and he needs their students to combine their knowledge of history with an ability to analyze and critique other civilizations. Things like that (and a million others) can be great places to institute some group work.

Properly structured, group projects can reinforce skills that are relevant to both group and individual work, including the ability to:

1. Break complex tasks into parts and step.
2. Plan and manage time.
3. Refine understanding through discussion and explanation.
4. Give and receive feedback on performance.
5. Challenge assumptions.
6. Develop stronger communication skills.

Group work can help student skills in..

1. Listening to and respecting others' ideas.
2. Thinking about one problem in a variety of ways.
3. Getting to deeper level understanding through having to explain a perspective and discuss it with folks with different perspectives.
4. Dividing up tasks and delegating responsibilities.
5. Sharing knowledge and abilities to get a better hold on a problem than they could individually.
6. Holding group members accountable and being held accountable back.

CONCLUSION

Along with some of those and a whole bunch of other pros, there's the possibility of assigning bigger, harder problems to work on, and an added element of unpredictability than can make for greater learning possibilities overall.
